

YOUSSEF IBRAHIM HUSSEIN

Backend Developer • .NET / ASP.NET Core

+20 109 781 9773 | yy7692651@gmail.com | [LinkedIn](#) | [GitHub](#) | Cairo, Egypt

PROFESSIONAL SUMMARY

Computer Science graduate and backend developer specialising in ASP.NET Core and .NET 8. Experienced in RESTful API design, relational data modelling and layered architectures (Clean Architecture, Modular Monolith, CQRS), with hands-on delivery of three full systems covering authentication, payments, background job processing and real-time communication.

TECHNICAL SKILLS

Core .NET: C#, .NET 8, OOP, LINQ, Async / Await, Dependency Injection, Middleware Pipeline, Configuration & Options

.NET Frameworks: ASP.NET Core Web API, ASP.NET Core MVC, Entity Framework Core 8, ASP.NET Core Identity, SignalR, MediatR, AutoMapper, Hosted & Background Services (IHostedService), Blazor WebAssembly, .NET Aspire

Software Architecture: Clean / Onion Architecture, Layered Architecture, Modular Monolith, CQRS, Separation of Concerns, Domain Modelling, Bounded Modules

Design Principles & Patterns: SOLID, Repository & Generic Repository, Unit of Work, Factory, Mediator, Dependency Injection, DTO / ViewModel Mapping, Options Pattern

System Design: RESTful API design & versioning, Relational schema design & normalisation, EF Core migrations, Query optimisation, State-machine workflows, Background job processing, Real-time communication (SignalR / WebSockets), Authentication & authorisation (JWT, OAuth 2.0, RBAC)

Databases & Tools: SQL Server, T-SQL • Visual Studio, Git & GitHub, GitHub Actions, Postman, Swagger / OpenAPI, Agile / Scrum

PROFESSIONAL EXPERIENCE

Backend Developer Intern — Microtec International Jun 2025 – Sep 2025

- Developed backend features in C# and ASP.NET Core within an in-house engineering team, following the company code review and delivery process.
- Modelled and queried relational data with Entity Framework Core, and built Blazor front-end components against internal Web APIs, covering the full path from UI to database.
- Collaborated in an Agile environment with daily stand-ups, task estimation and Git-based teamwork.

PROJECTS

Petzy — Veterinary Clinics Platform (Graduation Project) Backend Developer

.NET 8 • ASP.NET Core Web API • Modular Monolith • EF Core • SQL Server | github.com/Veterinaryclinics/Backend

- Built the backend for a full veterinary care platform serving a Flutter mobile client and an AI service, structured as a modular monolith with nine bounded modules behind a single API host.
- Owned modules spanning Security, Clinic Management, Pets, Appointments, E-commerce, Chat, Chatbot and Video Calls, sharing cross-cutting concerns through a dedicated Building Blocks layer.
- Designed the appointment booking domain — entity relationships, validation rules and API contracts consumed by the mobile team across a multi-repository Git workflow.

PeerCar — Peer-to-Peer Car Rental Platform Personal Project

.NET 8 • ASP.NET Core MVC • Clean Architecture • SignalR • SQL Server | github.com/YoussefIbrahim13/PeerCar

- Designed and built a car rental marketplace on Clean Architecture, separating Domain, Application, Infrastructure and Presentation so business rules stay framework-independent.
- Modelled the rental lifecycle as a state machine and enforced it with two background workers that auto-complete finished bookings and cancel expired ones without manual intervention.
- Implemented ASP.NET Core Identity with Google OAuth 2.0 and role-based access for Admin, Owner and Renter, plus an admin panel for KYC review, car approval and platform statistics.
- Applied a generic repository over EF Core with global soft-delete filters and GUID keys, and streamed AI assistant replies to the browser through a SignalR hub.

Employee Attendance & Departure System Team Project

.NET 8 • Web API • Blazor WebAssembly • CQRS + MediatR • JWT | github.com/YoussefIbrahim13/Attendance-and-departure-system

- Developed an HR system for attendance, working hours and leave requests, split into separate Auth and File-Import APIs orchestrated by a .NET Aspire AppHost and structured around CQRS with MediatR.
- Built a CSV bulk-import pipeline with dynamic validation and automatic working-hours calculation, surfaced through daily, monthly and yearly attendance views.
- Secured the system with JWT authentication and role-based authorisation (Admin / Employee), including password reset and admin-controlled account management.

EDUCATION & TRAINING

B.Sc. in Computer Science — El Shorouk Academy, Cairo Graduated Jun 2026

Coursework: OOP, Data Structures & Algorithms, Database Systems, System Analysis & Design, Design Patterns, Software Engineering.

ASP.NET Core Diploma — Route IT Training Center May 2024 – Oct 2024

Backend track covering C#, OOP & SOLID, ASP.NET Core MVC and Web API, EF Core, LINQ and SQL Server.

ADDITIONAL INFORMATION

Volunteering: Head of Media and Branding, IEEE Shorouk Academy Student Branch (Oct 2023 – Feb 2025) — led branding strategy and social media across technical events and workshops.

Military Service: Exempted (Final Exemption Certificate) | Languages: Arabic (Native), English (Professional Working Proficiency)
